Journal of Materials Processing Technology 109 (2001) 378–383

Journal of Materials Processing Technology

www.elsevier.com/locate/jmatprotec

Subject Index of Volume 109

Abrasive electrical discharge machining
Selected problems of abrasive hybrid machining, 360
Abrasive electrochemical machining
Selected problems of abrasive hybrid machining, 360
Acoustic emission
Some aspects of acoustic emission signal pre-processing, 242
Adaptation
Modeling of forming efficiency using genetic programming, 20
Alloy steel
Investigation on non-conventional honing of sculptured surfaces for parts made of alloy steel, 270
AlSi7Mg/Al_2O_3
Electrical discharge machining characteristics of metal matrix composites, 367
AlSi7Mg/SiC
Electrical discharge machining characteristics of metal matrix composites, 367
Aluminium
Hydrogen-assisted degradation of some non-ferrous metals and alloys, 206
Aluminum film
Joining of AlN ceramic to metals using sputtered Al or Ti film, 277
Aluminum nitride
Joining of AlN ceramic to metals using sputtered Al or Ti film, 277
Appraisal costs
The economic aspects of the implementation of a quality system process in Polish enterprises, 196
Artificial intelligence
Modeling of forming efficiency using genetic programming, 20
Artificial neural networks
Prediction of ductile cast iron quality by artificial neural networks, 305
Austenitic stainless steel
Free surface contribution to sensitization of an austenitic stainless steel, 2
AutoCAD
Part program automatic check for three axis CNC machines, 290

BEM
BE analysis of shaft–hub couplings with polygonal profiles, 30
Binder
Development of a novel binder system for manufacture of ceramic heart valve prostheses, 161
Blades
Computer support for "all-round" ECM processing of blades, 324
Brass
Ductility minimum temperature in selected mono-phase, binary brasses, 142

CAD
BE analysis of shaft–hub couplings with polygonal profiles, 30
CAM system
CAD/CAM technological environment creation as an interactive application on the Web, 222
Carbon–carbon composites
Characteristics of carbon–carbon composite turning, 65
Case
Structure and properties of high-speed steels with wear resistant cases or coatings, 44
Chromium depletion
Free surface contribution to sensitization of an austenitic stainless steel, 2
CNC machines
Part program automatic check for three axis CNC machines, 290
Coating
Structure and properties of high-speed steels with wear resistant cases or coatings, 44
Cobalt
The influence of 5% cobalt addition on structure and working properties of the 9-2-2-5, 11-2-2-5 and 11-0-2-5 high-speed steels, 52
Complicated surfaces
Mathematical modelling of three-dimensional electrochemical forming of complicated surfaces, 314
Component-based architecture
CAD/CAM technological environment creation as an interactive application on the Web, 222
Composite layers
Structure of laser cladded tungsten carbide composite coatings, 154
Computer modelling
Mathematical modelling of three-dimensional electrochemical forming of complicated surfaces, 314
Computer simulation
Interrelationships between cutting force variation and tool wear in end-milling, 229
Condition monitoring
A fuzzy approach to the condition monitoring of a packaging plant, 83
Copper
Hydrogen-assisted degradation of some non-ferrous metals and alloys, 206
Crystallization process
Changes of mechanical properties and fracture morphology of amorphous tapes involved by heat treatment, 190
Cutting
Influence of feed motion features on small holes drilling process, 236
Cutting ability
The influence of 5% cobalt addition on structure and working properties of the 9-2-2-5, 11-2-2-5 and 11-0-2-5 high-speed steels, 52
Cutting conditions
Characteristics of carbon–carbon composite turning, 65
Cutting fluids
Ecological aspects of the cutting fluids and its influence on quantifiable parameters of the cutting processes, 181
Cutting force
Interrelationships between cutting force variation and tool wear in end-milling, 229

Elsevier Science B.V.
PII: S0924-0136(00)00888-8

Cutting material
Interaction of the workpiece material's technological past and machining parameters on the desired quality of the product surface roughness, 105
Cutting zone
Hardening phenomena of Mn-austenite steels in the cutting process, 96
Cyanoacrylate
Development of a novel binder system for manufacture of ceramic heart valve prostheses, 161
Cylindrical grinding process
An intelligent system for grinding wheel condition monitoring, 258

Deep drawing
Preliminary studies on the suitability of rheocast Al alloys for deep drawing, 168
Simulation of wrinkling in sheet metal forming, 283
Deformation
Ductility minimum temperature in selected mono-phase, binary brasses, 142
Deformation mechanism
Ductility minimum temperature in selected mono-phase, binary brasses, 142
Design
Computer simulation system for electrochemical shaping, 354
Die geometry
SSEM: a computer model for a polymer single-screw extrusion, 308
Diffusive layers
Phosphorus in the composite nitrided layers, 133
Distributed manufacturing
CAD/CAM technological environment creation as an interactive application on the Web, 222
Ductile cast iron
Prediction of ductile cast iron quality by artificial neural networks, 305
Ductility minimum temperature
Ductility minimum temperature in selected mono-phase, binary brasses, 142

ECM
Computer support for "all-round" ECM processing of blades, 324
ECM process
The numerical simulation of the unsteady ECM process, 327
Electrical discharge machining
Electrical discharge machining characteristics of metal matrix composites, 367
Electrochemical forming
Mathematical modelling of three-dimensional electrochemical forming of complicated surfaces, 314
Electrochemical machining
Electrochemical machining under orbital motion conditions, 339
Computer simulation system for electrochemical shaping, 354
Electrochemical machining (ECM)
Inverse problems of shaping by electrochemical generating machining, 347
Electrodischarge
New possibilities of machining and electrodischarge alloying of free-form surfaces, 371
Embrittlement
Ductility minimum temperature in selected mono-phase, binary brasses, 142
Hydrogen-assisted degradation of some non-ferrous metals and alloys, 206
End-milling
Interrelationships between cutting force variation and tool wear in end-milling, 229

Energy consumption
Efficiency of special segmental grinding wheel, 264
Envelope motion
Inverse problems of shaping by electrochemical generating machining, 347
Environmental impact
Ecological aspects of the cutting fluids and its influence on quantifiable parameters of the cutting processes, 181
Erosion resistance
The influence of 5% cobalt addition on structure and working properties of the 9-2-2-5, 11-2-2-5 and 11-0-2-5 high-speed steels, 52
Eutectic reactions
Improvement of 319 aluminum alloy casting durability by high temperature solution treatment, 174

Failure costs
The economic aspects of the implementation of a quality system process in Polish enterprises, 196
Failure mode and effects analysis
The economic aspects of the implementation of a quality system process in Polish enterprises, 196
Feed features
Influence of feed motion features on small holes drilling process, 236
Fibrillation/disintegration mechanism
Modeling for morphology development during single-screw extrusion of LDPE/PS blend, 320
Fine turning
Interaction of the workpiece material's technological past and machining parameters on the desired quality of the product surface roughness, 105
Finite element techniques
Simulation of wrinkling in sheet metal forming, 283
Forming efficiency
Modeling of forming efficiency using genetic programming, 20
Forming Limit Diagrams
Prediction of the influence of yield locus on the limit strains in sheet metals, 9
Fracture morphology
Changes of mechanical properties and fracture morphology of amorphous tapes involved by heat treatment, 190
Fuzzy logic
A fuzzy approach to the condition monitoring of a packaging plant, 83
Fuzzy logic control
Fuzzy control systems with application to machining processes, 38
Fuzzy logic decision system
An intelligent system for grinding wheel condition monitoring, 258
Fuzzy sets
Fuzzy control systems with application to machining processes, 38

Genetic algorithms
A production scheduling problem using genetic algorithm, 90
Genetic programming
Modeling of forming efficiency using genetic programming, 20
Gradient material
Joining of AlN ceramic to metals using sputtered Al or Ti film, 277
Grinding
Residual stress in grinding, 254
Grinding wheel
An intelligent system for grinding wheel condition monitoring, 258

Hardening
Hardening phenomena of Mn-austenite steels in the cutting process, 96

Hardness
The effect of silicon and vanadium alloying on the microstructure of air cooled forged HSLA steels, 78
Heart valve
Development of a novel binder system for manufacture of ceramic heart valve prostheses, 161
Heat resisting alloys
Fe–Al–Cr heat resistant sinters, 138
Heat treatment
Structure and properties of high-speed steels with wear resistant cases or coatings, 44
Improvement of 319 aluminum alloy casting durability by high temperature solution treatment, 174
Heat treatment of amorphous structure
Changes of mechanical properties and fracture morphology of amorphous tapes involved by heat treatment, 190
High productivity
New possibilities of machining and electrodischarge alloying of free-form surfaces, 371
High-speed steel
Structure and properties of high-speed steels with wear resistant cases or coatings, 44
The influence of 5% cobalt addition on structure and working properties of the 9-2-2-5, 11-2-2-5 and 11-0-2-5 high-speed steels, 52
Hill'93 yield criterion
Prediction of the influence of yield locus on the limit strains in sheet metals, 9
HSLA steel
The effect of silicon and vanadium alloying on the microstructure of air cooled forged HSLA steels, 78
Hybrid machining process
Selected problems of abrasive hybrid machining, 360
Hydrogen
Hydrogen-assisted degradation of some non-ferrous metals and alloys, 206

Integrated CAD/CAM systems
System integrated product design, CNC programming and post-processing for three-axis lathes, 294
Intermetallics
Hydrogen-assisted degradation of some non-ferrous metals and alloys, 206

Laplace equation
Computer support for "all-round" ECM processing of blades, 324
Laser cladding
Structure of laser cladded tungsten carbide composite coatings, 154
LDPE/PS blend
Modeling for morphology development during single-screw extrusion of LDPE/PS blend, 320

Machinability parameters
Ecological aspects of the cutting fluids and its influence on quantifiable parameters of the cutting processes, 181
Machine vision
Predictive sensor guided robotic manipulators in automated welding cells, 13
Machining
Characteristics of carbon–carbon composite turning, 65
Hardening phenomena of Mn-austenite steels in the cutting process, 96
The mathematical modelling of electrochemical machining with flat ended universal electrodes, 333
New possibilities of machining and electrodischarge alloying of free-form surfaces, 371
Machining systems
Fuzzy control systems with application to machining processes, 38
Marciniak–Kuczynski theory
Prediction of the influence of yield locus on the limit strains in sheet metals, 9
ε-martensite
Simulation of cold deformation influence on the final structure of austenitic steel, 120
Material removal rate
Comparison of material removal rate models and experimental results for the double-sided polishing process, 248
Mathematical modelling
Mathematical modelling of three-dimensional electrochemical forming of complicated surfaces, 314
The mathematical modelling of electrochemical machining with flat ended universal electrodes, 333
Mechanical properties
Investigation of microstructure prediction during experimental thermo-mechanical plate rolling, 112
Changes of mechanical properties and fracture morphology of amorphous tapes involved by heat treatment, 190
Prediction of ductile cast iron quality by artificial neural networks, 305
Melting process
Prediction of ductile cast iron quality by artificial neural networks, 305
Metal matrix composites
Electrical discharge machining characteristics of metal matrix composites, 367
Metal sheet formability
Prediction of the influence of yield locus on the limit strains in sheet metals, 9
Metal-forming
Modeling of forming efficiency using genetic programming, 20
Metallic glasses
Changes of mechanical properties and fracture morphology of amorphous tapes involved by heat treatment, 190
Methyl methacrylate
Development of a novel binder system for manufacture of ceramic heart valve prostheses, 161
Microdrilling
Influence of feed motion features on small holes drilling process, 236
Microhardness
The effect of silicon and vanadium alloying on the microstructure of air cooled forged HSLA steels, 78
Microstructure prediction
Investigation of microstructure prediction during experimental thermo-mechanical plate rolling, 112
Mn-austenite steel
Hardening phenomena of Mn-austenite steels in the cutting process, 96
Modeling
Modeling of forming efficiency using genetic programming, 20
Moulding
Development of a novel binder system for manufacture of ceramic heart valve prostheses, 161
Multi-electrolyte holes
Electrochemical machining under orbital motion conditions, 339

Nanocrystalline structure
Changes of mechanical properties and fracture morphology of amorphous tapes involved by heat treatment, 190
Neural networks
Classifying the wear of turning tools with neural networks, 300

Nickel
Hydrogen-assisted degradation of some non-ferrous metals and alloys, 206
Niobium
Hydrogen-assisted degradation of some non-ferrous metals and alloys, 206
Nitriding
Phosphorus in the composite nitrided layers, 133
Non-conventional grinding
Efficiency of special segmental grinding wheel, 264
Non-conventional honing
Investigation on non-conventional honing of sculptured surfaces for parts made of alloy steel, 270
Numerical simulation
The numerical simulation of the unsteady ECM process, 327
Numerical simulation of solidification process
Analysis of thermal processes in solidifying casting using the combined variant of the BEM, 126

Operating quality costs
The economic aspects of the implementation of a quality system process in Polish enterprises, 196
Optimization
Computer simulation system for electrochemical shaping, 354
Orbital motion
Electrochemical machining under orbital motion conditions, 339
Oxidation
Fe–Al–Cr heat resistant sinters, 138

Packaging
A fuzzy approach to the condition monitoring of a packaging plant, 83
Part program
Part program automatic check for three axis CNC machines, 290
Phase transformation
Structure and properties of high-speed steels with wear resistant cases or coatings, 44
Phosphonitriding
Phosphorus in the composite nitrided layers, 133
Polygonal profile
BE analysis of shaft–hub couplings with polygonal profiles, 30
Postprocessors
System integrated product design, CNC programming and post-processing for three-axis lathes, 294
Precipitation
Investigation of microstructure prediction during experimental thermo-mechanical plate rolling, 112
Precipitation strengthening
The effect of silicon and vanadium alloying on the microstructure of air cooled forged HSLA steels, 78
Precipitation strengthening effect
The influence of 5% cobalt addition on structure and working properties of the 9-2-2-5, 11-2-2-5 and 11-0-2-5 high-speed steels, 52
Prevention costs
The economic aspects of the implementation of a quality system process in Polish enterprises, 196
Process automation
New possibilities of machining and electrodischarge alloying of free-form surfaces, 371
Proeutectoid ferrite
The effect of silicon and vanadium alloying on the microstructure of air cooled forged HSLA steels, 78
PVD process
Structure and properties of high-speed steels with wear resistant cases or coatings, 44

Quality cost account
The economic aspects of the implementation of a quality system process in Polish enterprises, 196
Quality cost optimisation
The economic aspects of the implementation of a quality system process in Polish enterprises, 196
Quality cost procedure
The economic aspects of the implementation of a quality system process in Polish enterprises, 196
Quality cost ratios
The economic aspects of the implementation of a quality system process in Polish enterprises, 196
Quality cost system
The economic aspects of the implementation of a quality system process in Polish enterprises, 196
Quality costs
The economic aspects of the implementation of a quality system process in Polish enterprises, 196
Quality system
The economic aspects of the implementation of a quality system process in Polish enterprises, 196

Recrystallization
Investigation of microstructure prediction during experimental thermo-mechanical plate rolling, 112
Residual stress
Residual stress in grinding, 254
Response surface method
Interaction of the workpiece material's technological past and machining parameters on the desired quality of the product surface roughness, 105
Rheocast structure
Contribution to the study of mechanisms involved in the formation of rheocast structure, 215
Rheocasting
Contribution to the study of mechanisms involved in the formation of rheocast structure, 215
Rheological properties
SSEM: a computer model for a polymer single-screw extrusion, 308
Robotic
Predictive sensor guided robotic manipulators in automated welding cells, 13
Robots
Investigation on non-conventional honing of sculptured surfaces for parts made of alloy steel, 270

Scheduling
A production scheduling problem using genetic algorithm, 90
Secondary hardness
Structure and properties of high-speed steels with wear resistant cases or coatings, 44
Secondary hardness effect
The influence of 5% cobalt addition on structure and working properties of the 9-2-2-5, 11-2-2-5 and 11-0-2-5 high-speed steels, 52
Self-dressing
Efficiency of special segmental grinding wheel, 264
Semi-solid alloy
Contribution to the study of mechanisms involved in the formation of rheocast structure, 215
Semi-solid material
Contribution to the study of mechanisms involved in the formation of rheocast structure, 215
Semi-solid state
Preliminary studies on the suitability of rheocast Al alloys for deep drawing, 168

Sensing techniques
Development of a novel ultrasound monitoring system for container filling operations, 72
Signal pre-processing
Some aspects of acoustic emission signal pre-processing, 242
Silicon and vanadium alloying
The effect of silicon and vanadium alloying on the microstructure of air cooled forged HSLA steels, 78
Simulation
Computer support for "all-round" ECM processing of blades, 324
Computer simulation system for electrochemical shaping, 354
Simulation of upsetting transmission electron microscopy investigation
Simulation of cold deformation influence on the final structure of austenitic steel, 120
Single-screw extruder
Modeling for morphology development during single-screw extrusion of LDPE/PS blend, 320
Single-screw extrusion model
SSEM: a computer model for a polymer single-screw extrusion, 308
Sinters
Fe–Al–Cr heat resistant sinters, 138
Slip bands
Simulation of cold deformation influence on the final structure of austenitic steel, 120
Slurry
Comparison of material removal rate models and experimental results for the double-sided polishing process, 248
Small holes drilling
Influence of feed motion features on small holes drilling process, 236
Solidifying casting
Analysis of thermal processes in solidifying casting using the combined variant of the BEM, 126
Spikes
Electrochemical machining under orbital motion conditions, 339
Stacking faults
Simulation of cold deformation influence on the final structure of austenitic steel, 120
Surface roughness
Interaction of the workpiece material's technological past and machining parameters on the desired quality of the product surface roughness, 105
Surface sensitization
Free surface contribution to sensitization of an austenitic stainless steel, 2
Swift model
Prediction of the influence of yield locus on the limit strains in sheet metals, 9

Tapping
Ecological aspects of the cutting fluids and its influence on quantifiable parameters of the cutting processes, 181
Tempered steel
Interaction of the workpiece material's technological past and machining parameters on the desired quality of the product surface roughness, 105
The boundary element method
Analysis of thermal processes in solidifying casting using the combined variant of the BEM, 126
Thermal analysis
Improvement of 319 aluminum alloy casting durability by high temperature solution treatment, 174
Thermo-chemical treatment
Structure and properties of high-speed steels with wear resistant cases or coatings, 44
Thixoforming
Preliminary studies on the suitability of rheocast Al alloys for deep drawing, 168
Three-axis turning machines
System integrated product design, CNC programming and post-processing for three-axis lathes, 294
Titanium
Hydrogen-assisted degradation of some non-ferrous metals and alloys, 206
Titanium film
Joining of AlN ceramic to metals using sputtered Al or Ti film, 277
Tool life
Hardening phenomena of Mn-austenite steels in the cutting process, 96
Tool materials
Characteristics of carbon–carbon composite turning, 65
Tool wear
Interrelationships between cutting force variation and tool wear in end-milling, 229
Total quality management
The economic aspects of the implementation of a quality system process in Polish enterprises, 196
Tungsten carbide
Structure of laser cladded tungsten carbide composite coatings, 154
Turning tools
Classifying the wear of turning tools with neural networks, 300
Two-dimensional process
The numerical simulation of the unsteady ECM process, 327

Ultrasound transducers
Development of a novel ultrasound monitoring system for container filling operations, 72
Universal electrode
Inverse problems of shaping by electrochemical generating machining, 347
Universal electrodes
The mathematical modelling of electrochemical machining with flat ended universal electrodes, 333

Vanadium
Hydrogen-assisted degradation of some non-ferrous metals and alloys, 206
Volume of retained austenite
The influence of 5% cobalt addition on structure and working properties of the 9-2-2-5, 11-2-2-5 and 11-0-2-5 high-speed steels, 52

Wall resonance approach
Development of a novel ultrasound monitoring system for container filling operations, 72
Wear
Classifying the wear of turning tools with neural networks, 300
Wear and erosion resistance
Structure and properties of high-speed steels with wear resistant cases or coatings, 44
Wear resistance
Structure of laser cladded tungsten carbide composite coatings, 154
Welding
Predictive sensor guided robotic manipulators in automated welding cells, 13
Wheel/workpiece
Residual stress in grinding, 254

Workpiece
Comparison of material removal rate models and experimental results for the double-sided polishing process, 248
Wrinkling
Simulation of wrinkling in sheet metal forming, 283
WWW applications
CAD/CAM technological environment creation as an interactive application on the Web, 222
Yield stress
Modeling of forming efficiency using genetic programming, 20
Zirconium
Hydrogen-assisted degradation of some non-ferrous metals and alloys, 206
